

CHILDCARE MANAGEMENT SOFTWARE COMPARISON GUIDE

<p>There are many childcare management software packages available that range from \$300 to over \$4,000 to own, or \$59 to \$200 per month to use. These programs range from simple manual databases to fully featured automated systems. There are many differences between these packages in quality, functionality, usability, stability, and support. These differences separate a useful and professional product from others that are really no better than using paper and pencil (sometimes they are worse.) When comparing software, look for features that would automate as many of your daily tasks as possible. Don't settle for software that would still make you do many things manually.</p> <p>Advantage: Childcare Sage - Complete, professional, and affordable</p>	<p>Childcare Management software is usually categorized into systems designed for family day cares and centers. The software for centers is then offered in small and large packages based on enrollment and capacity. Functions including extensive batch processing, networking, flexible rates, extensive scheduling, comprehensive reporting, and accounts payable functionality are usually reserved for the larger center software, which is also much more expensive. When comparing software for different sized centers, make sure that functionality to automate your center and save you time is included. Forgoing functionality to save money only makes sense if you are willing to do many tasks manually.</p> <p>Advantage: Childcare Sage – only offered in one affordable, comprehensive version</p>
<p>Childcare Management software comes in both installed and online systems. Both of these platforms can offer similar functionality, but there are some key differences:</p> <ol style="list-style-type: none"> 1) With online systems, you are leasing the software; you don't own the software or your data, and there is a monthly fee to use the software, which can always increase. 2) To effectively use online software, you need a fast and reliable internet connection. If the internet is down or is slow, you can not use the software to its full potential. 3) Due to their design, online systems show less information on each screen and require more clicks to use. 4) With some online systems, you are charged based on the total number of children in the system, even children who no longer attend (many states require you to keep information for alumni children for several years.) This adds more ongoing costs to use the software. 5) Online systems tout accessibility and data safety, both of which are available in installed systems through online backup and remote login. <p>Advantage: Childcare Sage - PC based and includes free web based backup</p>	<p>Some of our "professional software" competitors sell their software in modules, reasoning that you shouldn't have to pay for modules you don't need, and that you can start small and purchase additional modules later. Buying software in pieces is expensive, and modules are frequently co-dependent, so if you need a specific function, you have to buy several modules. In addition, how much time will you spend doing things manually until you can afford to purchase additional modules to automate the functionality you need? (On page 5 of this guide, we price out the needed modules from our "module" competitor for a minimal set of functions that most centers would need. The prices are eye-opening.)</p> <p>Another big issue with module based software is how you use the software. When software is broken into modules, you have to go to that module for specific tasks. This can often mean that you have to go from module to module to perform a task.</p> <p>Advantage: Childcare Sage - No Modules, period!</p>
<p>Childcare Management Software support ranges from all inclusive phone, email, and online support, all the way down to email support that is answered within several days. Many users of software that lacks good support struggle to find answers, resort to doing things manually, or in the worst case, simply give up and go back to how they were doing things before they got their new software. Even though you may only need support occasionally, having access to that support is very important. Your new software should also offer multiple training options to help you use the software, including training on request, video tutorials, comprehensive documentation (including manuals and guides,) and forum areas that answer common questions.</p> <p>When you do need live support, you should be able to get instruction and advice from knowledgeable support persons. There is nothing worse than having a support person read to you from a manual -> you could have done that yourself.</p> <p>Advantage: Childcare Sage - Inclusive affordable support and knowledgeable people</p>	<p>New version updates help to keep your software current and relevant. Some childcare management software competitors release a new version every few years. Some haven't released a major update in over a decade! Think of how quickly technology changes, and how much less productive you will be if you get new versions every few years.</p> <p>Another issue with updates is cost. Reasonable annual support costs are one thing, but charging over \$800 for major new versions is something else. One of our "professional" competitors released a new version and then asked their users to upgrade to that new version at 50% off the retail price of a new package. This is after these users spent thousands of dollars on their software, and then dutifully paid their annual support.</p> <p>Advantage: Childcare Sage - All updates are included in the low annual support charge</p>
<p>Most childcare management software packages don't have a return policy and all sales are final. Our competitors reason that since they offer a trial, you have sufficient opportunity to try their software to make sure it will work for you. The biggest problem with this reasoning is that centers looking for software are usually comparing a handful of packages; and simply don't have the time to enter a lot of data into each one to try it. Most often, centers enter a handful of children into the software and decide which package they want based on very limited interaction with the software. This is why we get calls from centers looking for different software after using their existing software for a short time. (After spending thousands of dollars.)</p> <p>Advantage: Childcare Sage- 100% 60 Day Money Back Guarantee</p>	<p>At most larger centers, childcare management software is used from multiple computers. Having 2 people enter data is much faster than 1 person, and having the director, owner, accounting person, and other staff be able to be in the system at the same time increases productivity.</p> <p>Most of our competitors make you purchase additional seat licenses to use the system from multiple computers. We believe that you should have the ability to use our software from as many computers as you want to manage your center without additional charges.</p> <p>Advantage: Childcare Sage- Unlimited seat licenses to manage the same center.</p>

CHILDCARE MANAGEMENT SOFTWARE COMPARISON GUIDE

Our functionality speaks for itself. Please review our extensive feature and comparison chart below:

Feature M(number) means module	ChildCare Sage™	ProCare™
version	v19.1	v10
Child Information		
Store child information including medical history, remarks, immunizations, and photos	●	●
Store parent and pickup person information including address, phone numbers, email, and photos	●	●
Store center information including class, enroll dates, and bus run information	●	●
Store different schedules by class and days	●	●
Store different schedules by date ranges (used for waitlists, and to reserve future slots in classes)	●	●
Setup additional, searchable user defined fields (dates, numbers, text, checkboxes)	●	●
Waitlist with waitlist aging reports	●	●
Child Progress / Incidents		
Track child progress, milestones, and achievements through daily log	●	
Track child incidents through event log	●	●
Staff Information		
Store staff information including certifications and photos	●	M4
Store job information including class, employment dates, and work schedule	●	M4
Store future work schedules by date ranges (used for future child/staff ratio planning)	●	M4
Setup additional user defined fields (dates, numbers, text, checkboxes)	●	M4
Timeclock		
Let parents sign their children in/out	●	M3
Let staff sign themselves in/out	●	M3
Display general messages	●	M3
Leave messages for specific parents and staff	●	M3
Let parents leave messages to staff	●	
Sign in siblings together instead of 1 at a time	●	M3
Batch sign in/out groups of children (bus drop off, etc)	●	M3
Ability to have stand-alone, non-networked timeclock	●	M3
Ability to have multiple timeclock computers	●	(+\$195)
Door Access Control	●	(+\$95)
Screen layouts are optimized for touch screen monitors and windows 8/10 tablets	●	
Child Attendance		
Graphically track child attendance	●	M3
Print attendance reports that show child counts, children arriving and leaving, and capacity	●	M3
Batch Timesheet entry with ability to copy timesheets from prior days (centers that transcribe sign-in sheets)	●	
Child Billing		
Automatically calculate and charge accounts	●	M2
Allow batch payment posting	●	M2

Ability to setup and edit central/global list of rates	●	M2
Ability to assign rates to rooms and automatically copy rates into accounts	●	M2
Works with tuition and hourly based billing (including late pickup)	●	M2
Ability to automate late start, early dismissal, and no school charges for school age children	●	
Ability to itemize charges for additional classes (dance, etc) and daily charges (lunch bunch, etc.)	●	
Ability to add global discounts (sibling, employee child, member, etc)	●	
Ability to enter additional charges (field trips, registration, etc)	●	M2
Agency billing to separately track parent copays and balances	●	M8
Automatically generate child bills (with center logos)	●	M2
Automatically email child bills	●	M2
Maximum number of siblings that can be billed together	8	4
Use Barcode scanning to add charges into accounts	●	
Payment Processing (Credit Card and ACH processing- recurring, swipe, and online payment portal)		
Setup Fee	● (\$0)	\$195
Monthly Fee	● (\$0)	\$18/Month
Online Parent Payment Portal	● (\$0)	\$32/Month
USDA Meals Program		
Meals and Menu functionality integrated into main system	●	M7
Track child meals, meal times, and foods consumed	●	M7
Automatically track meals through TimeClock	●	M7
Print meals count charts	●	M7
Create, store, recall, and print daily menus / meal plans for newborns, infants and older children	●	M7
Copy meal plans between days	●	M7
Create production reports (shopping lists)	●	
Staff Timesheets		
Graphically track staff hours	●	M3
Keep track of vacation, personal, sick-leave and holiday hours	●	M4
Print staffing reports that show daily staff counts and staffing schedules	●	M4
Print staff schedules	●	M4
Staff Wages		
Automatically calculate and record wages	●	M6
Store payments to staff	●	M6
Works with salary, hourly, and overtime wages	●	M6
Setup different rates that apply to different days and hours (higher hourly rate for evenings or weekends)	●	
Ability to enter additional wages and expense reimbursements	●	M6
Automatically generate staff paysheets with hours, wages, and expense reimbursements	●	M6
Full Payroll system that withholds taxes and print paychecks	●	M6
Track monthly and quarterly federal and state payroll taxes	●	M6
Child/Contact Functions		
Find contacts and children through any combination of information	●	●
Store and Recall search criteria	●	●
Create custom reports with selectable information, information column order and contact grouping	●	
Center Functions		
Track and schedule center inspections, maintenance, etc	●	

Keep a daily center journal	●	
Center Ledger / Expenses		
Store center expenses such as food, rent, utilities, etc	●	M5
Setup and apply recurring expenses (rent, utilities, etc) (don't have to reenter for each month)	●	M5
Track and reconcile bank accounts	●	M5
Calculate Net Income, Profit/Loss, etc	●	M5
Store mileage expenses	●	M5
Add time-use % to expenses	●	
Accounting Reports		
Reports that show childcare payments made and owed	●	M2
Account aging and overdue reports	●	M2
Reports that show staff wages paid and owed	●	M6
Revenue forecasting reports	●	
Organization Functions		
Daily Activities and To Do List	●	
Built in Appointment date book and alarms	●	
Create form letters through Microsoft Word®	●	●
System Functions		
Multiple level password system (8 levels) and Username/Password log in system	●	●
Built in On-Line Database Backup function	●	●
Networkable	●	M11
Multiple Site Functionality	●	●
Support for International Currency	●	
System with Common Modules (unlimited children)	\$795	\$3,265 ¹
Complete System with all Childcare Sage Functionality	\$795	\$3,460 ²
Free Support With Purchase	1yr	1yr
Annual Support	\$100	\$95
Support Includes Major Updates (6.0, 7.0, 8.0)	●	
Included License Seats for computers that manage the center (Main Program/Timeclock, ∞- unlimited)	∞ / ∞	2 / 1
Cost for additional License Seats (prices are to add network functionality to the package)	\$0	\$195
Return Policy	60 Day 100%	No Returns

Comparison Chart Symbol and Footnote Legend:

(^{number})- footnote, M(number)- module, +(price)- additional cost, 1- Typical cost includes: M1-M7, 2- Similar cost includes: M1-M8

Procure V10 Modules:

<u>Module</u>	<u>Cost</u>	<u>Module</u>	<u>Cost</u>	<u>Module</u>	<u>Cost</u>
M1- Family Data	\$695	M5- Accounts Payable	\$795	M9- Door Controller	\$95
M2- Family Accounting	\$395	M6- Payroll	\$295	M10- Corporate Organizer	?
M3- Attendance Tracker	\$395	M7- USDA Food Program	\$295	M11- Networking	\$195
M4- Employee Data	\$495	M8- Agency Accounting	\$195		

Module Pricing:

This section prices out software by modules. The minimal list of features that most centers need are:

Keeping records for children and staff, Scheduling and tracking attendance for children and staff, Billing parents, and Tracking center expenses (including Payroll)

The following is a list of the modules you would need from Procare™:

Procare Mini™: (less than 60 families)	Procare™: (more than 60 families)
Family Data (\$349)	Family Data (\$695)
Family Accounting (\$199)	Family Accounting (\$395)
Attendance Tracker (\$199)	Attendance Tracker (\$395)
Agency Accounting (\$99)	Agency Accounting (\$195)
Employee Data (\$249)	Employee Data (\$495)
Payroll (\$149)	Payroll (\$295)
Accounts Payable (\$399)	Accounts Payable (\$795)
Total: \$1,643	Total: \$3,265

For the minimal list of functions, the least expensive versions of Procare™ are from **3x** to **5x** the price of the Childcare Sage. If you add all of the modules needed to have similar functionality that comes standard in the Childcare Sage, those other programs would be from **4x** to **7x** the price of the Childcare Sage.

System Screenshots:

Screens in the Childcare Sage are clean and open, with defined entry boxes to help you work faster. Our screens display lots of information to keep you from having to click from screen to screen, and to make you more efficient. Our screens also use soft colors and gray backgrounds, instead of contrasting colors that can distract you.
